## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Akita et al. (WO 01/62517, cited by an applicant)(hereinafter referred to as 'Akita', corresponding US Patent (US 6,779,733) will be used for explanation purposes) in view of Higuchi et al. (US 6,380,614).

Akita teaches a non-contact ID card comprising an antenna circuit board (2) where an antenna (6) is formed on a substrate (9) and an interposer board (7) where an enlarged electrode (11a and 11b) to be connected to an electrode (12a and 12b) of an IC chip (4) is formed/embedded on a substrate (10) mounted with the IC chip, and laminating the antenna circuit board and the interposer board, screen printing method can be used for expanding electrode (see figs. 1-17; col. 3, lines 3-10; col. 3, line 50-col. 4, line 18 of the corresponding US Patent specification)

However, Akita fails to particularly teach that the thermoplastic resin is used for electrode.

Higuchi teaches a non-contact IC card manufacturing system comprising coating of insulating resin (16) with the thermoplastic resin (74) (see figs. 16 and 17; col. 11, lines 52-59).

Art Unit: 2876

It would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the teachings of Higuchi to the teachings of Akita in order to provide improved IC card by integrating components using the thermoplastic resin.

### ***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Morizumi et al. (US 6,459,588) discloses a non-contact IC card comprising a thermoplastic resin is used for binding circuit therein.
